

10 Benefits  
for your enterprise on  
1KEY Usage

1. 1KEY connects to any backend database of ERP irrespective of the ERP. It even picks up data from Excel to create a strong data warehouse to generate MIS reports. 1KEY gives a framework to business users to rely on single source of truthful data.

2. 1KEY has powerful query, analysis, and reporting capabilities through an intuitive and highly interactive interface that lets users drill down, sort, filter, group, alert, schedule reports & then quickly monitor and navigate relevant information. It's easy to deploy, provides access to data locked in transactional systems, and leverages information from your existing data stores. It can generate rich formatted reports which can be further exported to Excel, HTML, XML, PDF etc.

3. 1KEY framework forbids use of spreadsheets in meetings and presentations while ensuring better functionality, performance & visually stunning reports. Wide spread use of spreadsheets across the enterprise can create multiple versions of truthful data. 1KEY analytic functionalities with visually stunning reports will help business user's move away from spreadsheets and help MIS Managers generate report by connecting information among disparate applications.

4. 1KEY framework give business user's opportunity establishes data quality competency centre. Establish the system with the data which has an audit trail with referential integrity and data integrity in place.

5. 1KEY framework allows a remote user who is not connected to the data warehouse to get the report loaded with data and enable him to slice and dice the data. This flexibility of remote viewing is possible due to XML technology to export and import the reports with its metadata to the remote user who is not connected to data warehouse.

6. 1KEY MIS reporting solution offers solutions to effectively manage data centric applications. 1KEY can handle data complexities and optimize it for on demand preventive and predictive analysis data which has complete referential integrity.

7. Your existing SCM, ERP, CRM etc. are best for recording your transactions but not for generation of intelligent insight reports. Specialized reporting and analysis application 1KEY can expose your business users to all together new meaningful way of viewing data and analyzing data.

8. 1KEY helps retain the MIS intelligence due to its framework and is reusable and can be shared across enterprise. Your business users using spreadsheets shares only the result of the MIS and not the intelligence gone in getting that result and it is difficult to share it across enterprise if spreadsheet is used. Do not outsource the reporting and analysis to a third party using spreadsheets on your data. Develop and implement the reporting and analysis system in house using 1KEY frame work and roll out for all the business users of your enterprise.

9. 1KEY MIS Reporting tool guarantees truth as MIS is generated within the organization and cannot be manipulated by third party spread sheets. 1KEY eliminates the need to save multiple copies of a spreadsheet to reflect snapshot data at different points in time, and overcomes the challenges associated with changes to historical data that then cause the snapshot type spreadsheets to be incorrect.

10. 1KEY continues to offer MIS Managers a big opportunity to help their organizations and clients better analyse their operations. 1KEY can help reduce the risk of reporting errors. 1KEY can ensure the systems are effective and efficient, and not too dependent on one person or human. Most important, you can make sure 1KEY MIS Reporting is answering the right questions.
