Systemizer Software Installation
www.SystemizerSoftware.com

Step #1:
Click on the icon "setup.exe" FIRST. Running this program first will tell you if you need to download the latest Windows .NET framework to your computer for the Systemizer Software to work. If you do need it, it will auto download for you or you can run "Windows Update" from your browser to make sure you have the latest version of .Net Framework installed on your system.

Step #2:
Click on the icon "Setup.msi" SECOND. This will install the Systemizer Software application onto your computer.

Step #3: You should watch the short tutorial video to see how the software works and how to get the most benefit from using the software for your business.

Step #4: Create your own blue print system map or I have made several system maps that you can download and use for your business.

Example:
A) X-Treme Focus Blue Print System Map
B) Finding a Profitable Niche Blue Print System Map
C) More Maps Found in Secret Society Coaching- http://SecretSocietyCoaching.com

How To Unlock Systemizer Software Beyond The 7 Day Trial

You will need to have either purchased a license from Frank Bruno here-
http://secretsocietycoaching.com/v/Systemizer or have been a member in his Secret
Society Coaching http://SecretSocietyCoaching.com longer than 7 days to get your
license file.

Step #1 To Unlock: What you need to do is use the splash screen that shows
to you when you open the Systemizer software application then use the link "Register
License" that shows on there to request your unlock license.
You fill out your name/receipt number/e-mail and what this will do is auto register your
computer I.D that your running the software with so we know its you and then we check
this in our system on our end (in the Database) and then we <u>manually</u> e-mail you your
license file in a zip file to unlock your Software beyond 7 days.

<mark>**Register Your Software Step-By-Step Help Video**</mark>
http://SystemizerSoftware.com/videos/Register-Software

Step #2 To Unlock: Unzip the license file we sent to you. Then use the
"Submit license" link on the Systemizer Software splash screen that shows to you on
startup to import your new license file that we sent to you.

When you click on the link from the splash screen that shows to you when you run the
Systemizer Software it opens your documents folder or whatever folder you unzipped
your license file to.

Then you navigate in the folder to the license file we provided you.

You then select and click on the .slf license file and the software will automatically
import the file. This will permanently unlock the Systemizer Software for you to use**. <u>Do
not</u>** click on the .slf license file unless you are importing from within the software or
splash screen. This will do nothing and give you errors. This file was not meant to be
opened by itself.

User License

The software is for your Personal use only and will only function on one computer per license. The Systemizer Software and "Franks Custom Image Pack" images may not be given away or sold in any way whatsoever.

EXTREMELY IMPORTANT INSTALLATION TIPS!

1) Make sure you're running your windows operating system in Administrator mode. (System Admin mode)
2) Make sure you have run windows update to ensure you have all the latest versions of the .NET framework installed on your system. This includes .Net 1.0, 2.0, 3.5 versions. If you don't have all the .Net versions it will cause weird problems when trying to import your license file and when trying to run the software. I have many users who think they have all the latest version of .NET framework installed and discovered they didn't. To check, go to your "Add Remove" programs list and see which versions you have installed on your computer. This will cure 90%+ percent of any issues and is very common.
3) Make sure you have the latest **Java script** installed
4) Re-Boot your system after any updates
5) Relocate your personal license file that we sent you (Firstname-Last.slf) to the same folder as your Systemizer Software files are located and import the license file using the "register" link from the "HELP" menu when the application is running. Not from the splash screen.
6) Make sure your connected to the Internet when running the application
7) Make sure you are importing license for the Systemizer software to the same computer you originally requested the license for. Your license will only work the Systemizer software on that computer.

Vista Users

1. **VERY IMPORTANT**- To run as admin you have to right click the application... however, vista may not show the run as admin option when right clicking the application in the main programs list. You may have to go to your C drive and open the program files folder for the program and right click on the main application to be able to view the run as admin option.

2. You must place the license file in the program files folder on your c drive. Then you must right click the application in the program files folder in your c drive to get the run as admin option to appear, select that option, allow the windows security prompt that blocks you from running as admin, now browse for your personal license file from within the Systemizer to import the license file using the "register" link from the "HELP" menu when the Systemizer Software is running.
